

INTERDISCIPLINARY PRIVACY/HIPAA PRACTICE

OVERVIEW

We assist our clients with all of their HIPAA needs by bringing our profound knowledge to bear on a wide range of HIPAA issues. Specifically, we assist in drafting compliant business associate agreements and HIPAA policies and procedures, reviewing plans and communications for legal compliance, counseling clients with respect to the latest legislative changes, and strategizing as to the appropriate action following a security breach.

In those instances when HIPAA invokes broader federal and state privacy issues, we work with a multi-disciplinary and technical legal team to address such issues. This team was assembled to assist our clients in assessing areas of potential impact and developing a structured response to federal and state privacy laws and regulations, including HIPAA. We have analyzed the impact of various federal and state privacy laws and regulations upon our clients' businesses and operations, and have assisted them in risk assessment and remediation efforts. Our HIPAA privacy team possesses the depth and experience to provide cost-effective and results-oriented assistance to clients regarding complex and sophisticated HIPAA issues. We have provided HIPAA and privacy related advice to numerous clients in the areas of health care and related employee benefits.
